Dear FCC why are you even putting up with these Broadcasters that want to stop XM from providing it's customers with traffic and weather? Don't they have anything better to do? XM is good for the traveling person. You could be sitting in Des Moines IA and hear the traffic for Chicago and know what roads are closed due to weather or repairs. You could be traveling across the U.S. and never change the station. I wonder how many accidents are caused from motorist changing there radio stations. I'm 100% against this ruling.

Thank You for taking your time and reading this.
